Yes

Comments to the Author

The introduction best be concise, sharp and focused.
The design of the study should be explained more elaborate, in case of cohort, clinical or else. The said experimental would be better if explained in more specific category regarding study design.
What are the inclusion and exclusion criteria to be exact? The said samples didnt tell any impairment or handicaped it had. The results would be affected with the different nature of impairment the patient had. It'd be better to use standardized handicapped tools in the inclusion/exclusion criteria.
The RESULTS section should strictly just data. Dont mix it with redundancy repeat on DISCUSSION.
